

## Sooloos Media Drive 600 Recommended Hard Drive specification

### What hard drive should I specify for use with the Meridian Media Drive 600?

Media Drive 600 is not supplied with hard drives. Instead, we recommend that retailers and Installers purchase hard drives locally at the time of requirement.

Currently Meridian recommends hard drives with the following specification:

- 2TB
- 5400RPM
- low power ("green") \*
- 3.5" SATA drives

*(\*not for use with Twinstore & Ensemble)*

Meridian will update hard drive specification from time to time and as availability of larger capacity 3.5" SATA drives change.

### Do the drives have to be identical?

Yes - the drives have to be identical in order for the RAID 1 (disc mirroring) to function correctly.

### Can I use hard drives larger than 2TB?

Meridian is aware that hard drives supporting the above specification but in a larger size are being used successfully in the Meridian Media Drive 600. However, use of larger than 2TB drives is not supported by Meridian.

### Warranty

Meridian do not warranty products from 3<sup>rd</sup> party suppliers
